

PROPOSAL

Creative AI Pipeline

End-to-end AI-powered asset generation — from creative brief to production-ready deliverables. Backend pipeline, frontend dashboard, multi-provider infrastructure.

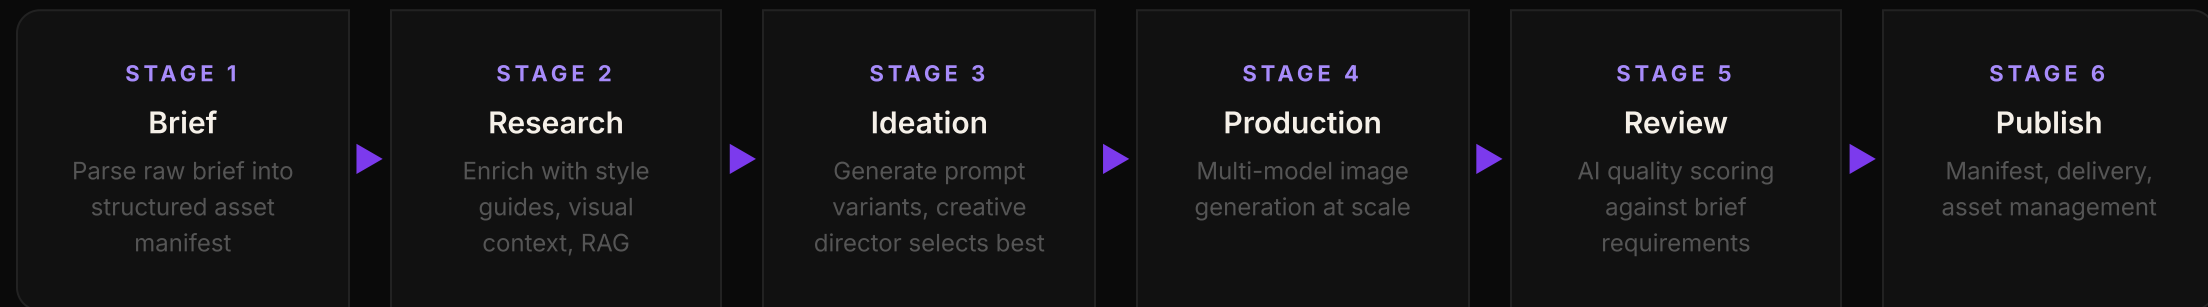

Prepared for Memory Creative
May 2026

THE SYSTEM

Six-Stage Pipeline

A creative brief goes in. Production-ready assets come out. Every stage is AI-driven, orchestrated, and auditable.

“

The pipeline doesn't lock you into one AI model. Right now DALL-E is great for some things, Stable Diffusion is better for others, and six months from now there'll be something new that blows both away. The way we've built this, swapping models or adding new ones is a config change, not a rebuild. You're not buying a tool that gets obsolete — you're buying infrastructure that gets better as AI gets better.

Bonito AI

LIVE EXAMPLE

Pipeline in Action

Here's what each stage actually produces — using a real campaign brief for a premium winery brand.

STAGE 1
Brief

Raw brief goes in. AI parses it into a structured asset manifest — identifying each deliverable, its dimensions, format, and creative intent.

Input: "Generate a summer campaign for Peller Estates – Niagara Nights..."
Output: 7 assets identified • Project: "Niagara Nights" • Palette: gold + burgundy • Tone: premium lifestyle

STAGE 2
Research

AI researches the brand, category, and art direction — then generates a style guide and enriched prompts for each asset.

Style guide: Warm golden-hour lighting, shallow depth of field, Niagara vineyard landscapes
Per-asset prompts: Enriched with brand-specific context, composition rules, colour grading notes

STAGE 3
Ideation

A "creative director" agent generates 2-3 prompt variants per asset exploring different visual directions, then selects the strongest one with rationale.

Hero Banner v1: Overhead patio shot, candlelit, wide vineyard vista
Hero Banner v2: Eye-level couple's perspective, intimate, bokeh lights
Selected: v1 – "Stronger sense of place, showcases the venue as a destination"

STAGE 4

Production

Selected prompts are sent to image generation models through Bonito's gateway. Each asset can route to the best model for its type — photography-style to DALL-E 3, illustrations to Stable Diffusion, etc.

7 assets generated • Routed to best model per asset type via Bonito gateway

hero_banner • instagram_post • instagram_story • fb_cover • email_header • print_ad • billboard

STAGE 5

Review

AI reviews each generated asset against the original brief — checking brand consistency, composition, colour palette adherence, and overall quality. Flags issues for human review.

6 approved • 1 flagged (email header – text legibility concern) • Overall score: 8.4/10

STAGE 6

Publish

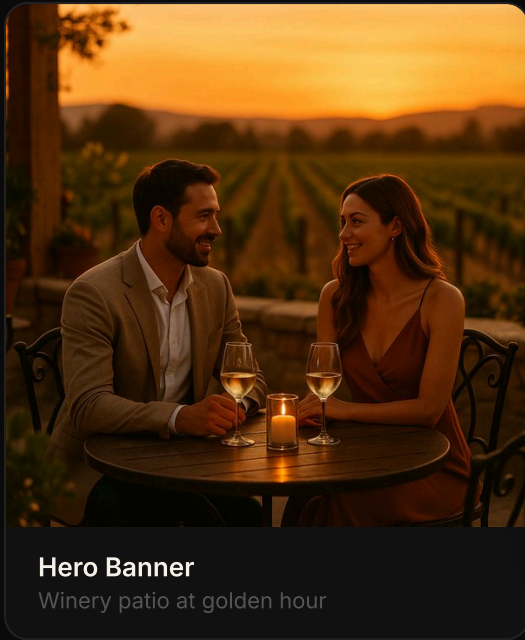

Assets organized by type, delivery manifest generated with metadata (dimensions, model used, cost, prompt). Ready for handoff to design team or direct delivery to client.

7 files delivered • manifest.json with full audit trail • Ready for handoff

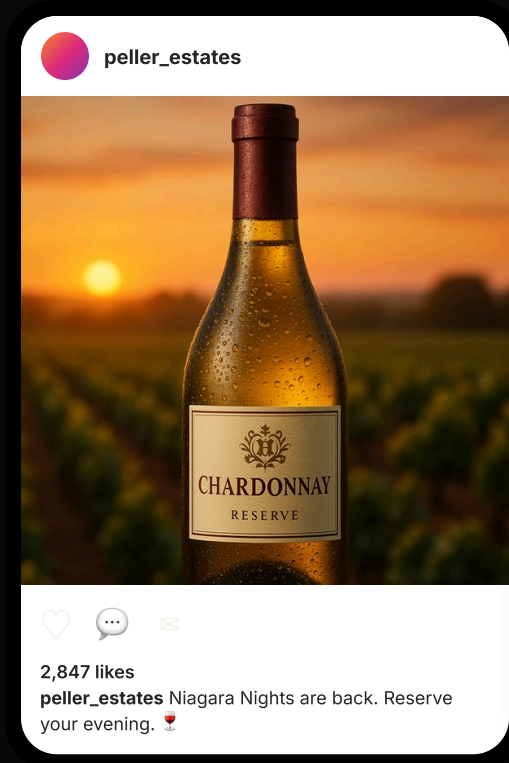

SAMPLE OUTPUT — PELLER ESTATES "NIAGARA NIGHTS"

Same brief, different style directions — the pipeline produces both from a single input.

Event Cover

From brief to deliverables in minutes, not days. A full campaign asset kit — generated end-to-end from a single text brief. Every asset is

consistent, on-brand, and ready for review.

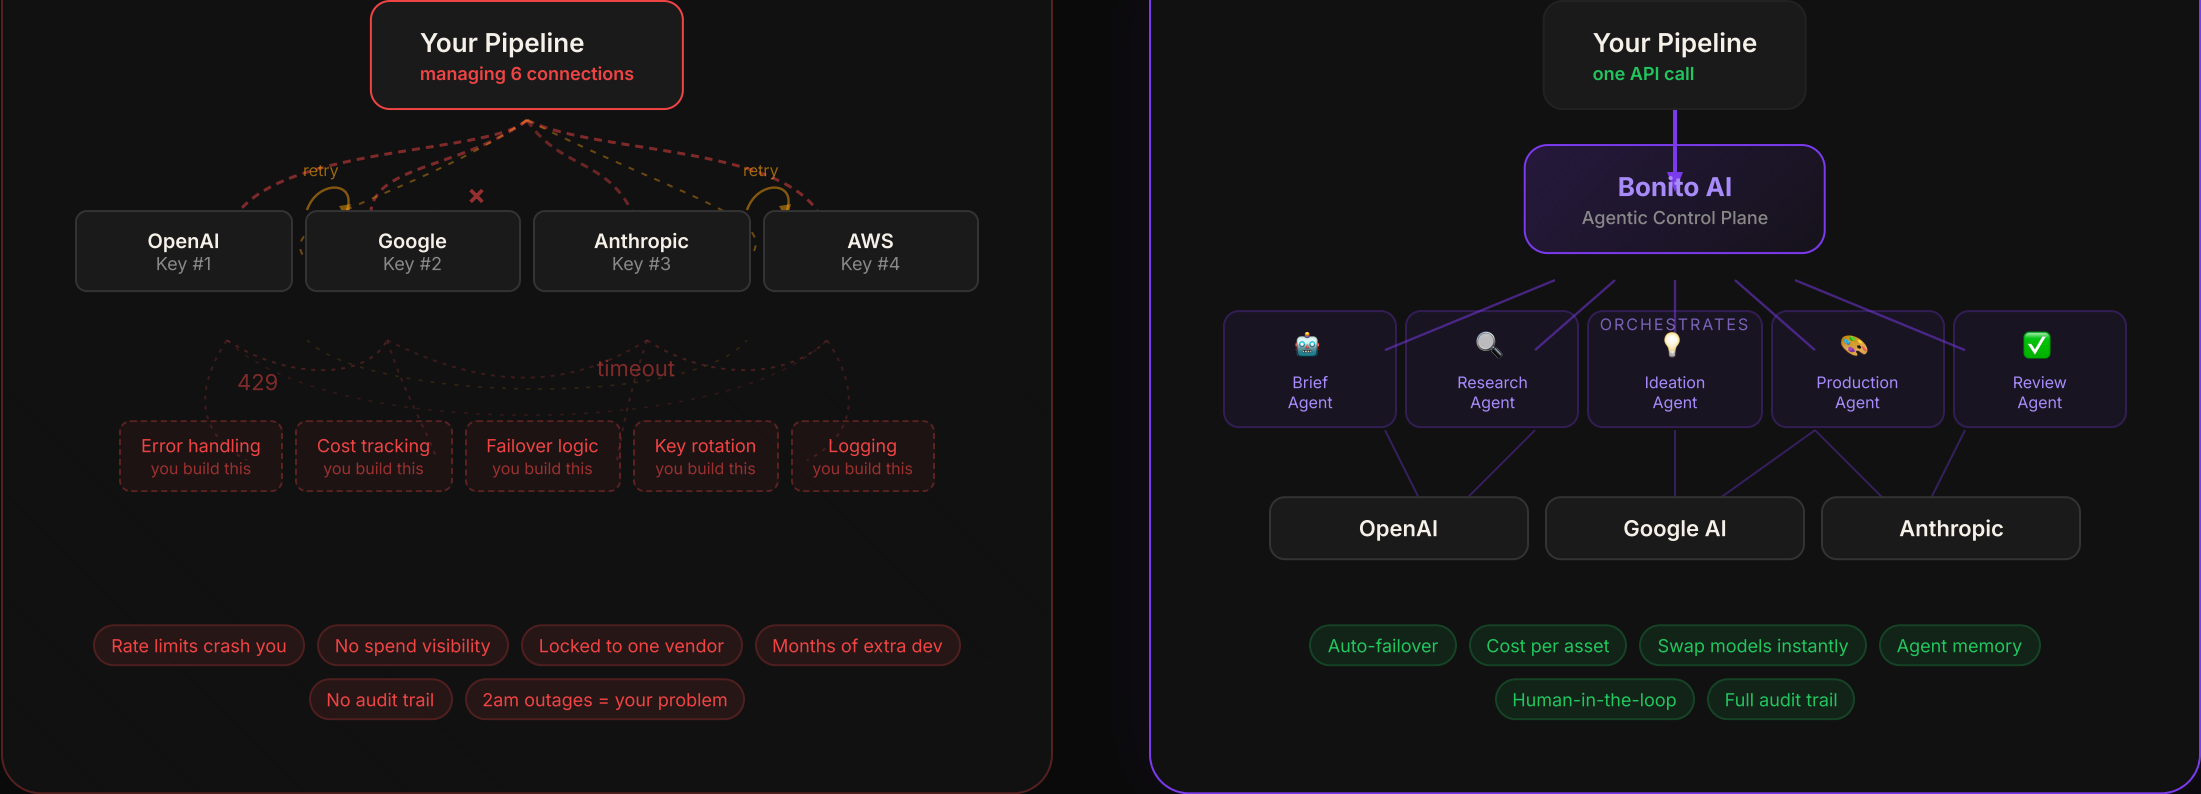

THE DIFFERENCE

Why This Runs on Bonito

A creative pipeline needs AI from multiple providers. Here's what that looks like with and without a control plane.

WITHOUT BONITO

WITH BONITO

The pipeline sends one request to Bonito. Bonito handles the rest — routing, failover, cost tracking, and logging. If a provider goes down at 2am before a client deadline, the system automatically switches to another. No one wakes up.

OWNERSHIP

What You Own

We build it, you use it — for every client, forever. Here's exactly how ownership works.

MEMORY CREATIVE OWNS

- ✓ **All creative output**
Every image, asset, and campaign deliverable belongs to you and your clients
- ✓ **Brand assets & prompts**
Your style guides, prompt libraries, and client configurations
- ✓ **Unlimited client usage**
Use the pipeline for as many clients as you want — Peller, or the next 50
- ✓ **Your data stays yours**
Full data portability — we never use your client data for anything else

BONITO MAINTAINS

- ⚙️ **Pipeline engine & frontend**
We own the platform code and keep it running, updated, and secure
- ⚙️ **Ongoing improvements**
New models, features, and performance upgrades — included in your subscription
- ⚙️ **Infrastructure & uptime**
Hosting, monitoring, failover, security patches — all handled
- ⚙️ **Custom development**
Need new features or integrations down the road? We build those at the same hourly rate

Think of it like Adobe Creative Suite — you don't own the software, but you have full commercial rights to everything you create with it. We maintain the engine; you own the output. This is the standard model for platform-based creative tools.

PHASE 1 SCOPE

Engagement Breakdown

Detailed scope for the initial build — from discovery through production deployment.

PHASE	HOURS
Discovery & Architecture Understand your workflows, asset types, delivery formats, brand guidelines, and existing tool integrations	6 hrs
Pipeline Backend — 6 Stages Brief parsing, research/RAG enrichment, ideation with creative director logic, multi-model production, QA review loop, publish and delivery	18 hrs
Multi-Provider Image Generation DALL-E 3, GPT-Image-1, Stable Diffusion, Imagen 3 — model selection per asset type, quality-based routing, automatic fallback chains	8 hrs
Frontend — Dashboard & UI Web interface for your team: submit briefs, track pipeline runs in real time, preview generated assets, download deliverables, view per-run cost breakdowns	16 hrs
Frontend — Approval & Review Flows Visual review interface for QA: approve/reject/request revision on individual assets, annotation tools, batch approval, revision history	10 hrs
Brand Integration & Customization Brand guidelines and style presets baked into prompts, delivery to your asset management system, team permissions	8 hrs
Production Hardening Error recovery, retry logic, rate limit handling, parallel batch optimization, structured logging	6 hrs
Testing, QA & Documentation End-to-end testing across asset types, edge cases, runbooks, team training sessions	6 hrs
Revision Buffer Client feedback cycles, scope adjustments, iteration	2 hrs
Total	80 hrs

INVESTMENT

Pricing

BUILD

Pipeline + Frontend

\$13,600

~~\$175/hr~~ \$170/hr × 80 hours

- Full 6-stage backend pipeline
- Web dashboard for your team — submit briefs, track runs, preview assets, download deliverables
- Visual review & approval interface
- Multi-model image generation (4+ providers)
- Brand guidelines baked in
- Production hardening & testing
- Team training and documentation
- Future enhancements quoted at \$170/hr as needed

PLATFORM

Bonito Pro

\$999/mo

First 4 months complimentary

- Multi-provider gateway (OpenAI, Google, AWS, Azure, Anthropic)
- Automatic failover — no downtime, no missed deadlines
- Real-time cost tracking per project, per client, per asset
- 500K requests/month included
- 5 managed AI agents
- Knowledge base (RAG) for brand docs
- Analytics dashboard & audit trail
- New models available as they ship — no code changes

→ Ongoing platform maintenance & updates included

How it works: The \$13,600 is a fixed-scope build — pipeline backend, frontend dashboard, and everything in the scope table above. Bonito Pro is the infrastructure it runs on. Any future enhancements or new features are quoted separately at \$170/hr — you only pay for what you need, when you need it.

Partnership terms: Our standard rate is \$175/hr — reduced to \$170/hr through our mutual connection with Wasim. Bonito Pro is complimentary for the first 4 months (build period + 2 months post-launch) so you can validate the ROI before committing. That's **\$4,000 in platform value** included at no cost. Standard \$999/mo billing begins month 5.

Ready to build?

Let's turn your creative workflows into a competitive advantage.
